

**Product Change Notification - No. NL28.10.2011**

07.11.2011

**New ROM-Version UX7**

Products:

FOX-IN

FOX-EN

Falcom informs that due to EOL note for UX6 ROM version chips from the Vendor of GPS modules they will move to the new ROM version UX7 of the ublox 6010 chipset used in the AVL products.

Falcom starts with the new UX7 from now on. First affected products are Fox-IN and Fox-EN. You will recognize devices with the new ROM version by an increased hardware revision number.

The UX7 ROM version gives a slightly better performance than the UX6 ROM version. Otherwise you will not notice any difference in behavior or firmware configuration.
