

Stutensee, July 2010

## NOTICE OF DISCONTINUATION

Ladies and Gentlemen,

based on information from our chip manufacturer VIA Technologies, Inc. an essential electronic component of our products listed below will be discontinued in a few months.

The following ETX/ETE modules will be affected by this:

**MSC ETE-CN700-CPUxxx-xxxxxx**

and all customized models derived from those.

Due to short term notification from VIA Technologies we have to inform our customers that we urgently need your last time orders.

Please order your full End-of-Life demand of the affected products by **August 31<sup>th</sup>, 2010 (Last Time Buy)**.

You may place your “non-cancellable / non-returnable” orders with fixed delivery dates, which have to be shipped completely before **June 30<sup>th</sup>, 2011 (Last Time Shipment)**.

To help our customers in this situation, MSC can offer long term available, innovative and compatible successor products based on Intel’s latest Atom technology.

The high performance module MSC ETE-PV510 (Intel dual core Atom, 1.66GHz) as well as the MSC ETE-A945GSE, based on Intel® Atom™ N270 (1.6 GHz), are well suited replacements for the ETE-CN700 models.

We recommend to test and evaluate these alternative modules soon to allow a seamless migration to the new platforms.

Please contact your MSC Sales Engineer as soon as possible for further discussion.

With kind regards,

MSC Vertriebs GmbH
