

## Silicon Storage Technology, Inc.

To: All SST CSF 36VF160XE Customers

Apr 21<sup>st</sup>, 2008

**SUBJECT:** Product Change Notification: SST36VF160XE Enhanced Latency Performance

Dear SST Customer,

As part of SST's continuing effort to provide you quality products at competitive prices, we are offering enhanced latency performance: for 36VF160XE. The enhanced products are derived from SST's existing 0.18  $\mu\text{m}$  process technology at the same fabrication location. The multiple suspend/resume/suspend latency cycles performance has been improved, an unspecified parameter on the data sheet . All specifications for DC characteristics and AC characteristics in the datasheet are unchanged.

We expect to start shipping the enhanced latency SST36VF160XE in volume production for all customers from September of 2008. Customer can visually identify the revision of 36VF160XE by looking at the last two letters of third row on the top of the device. The new revision will be ending with "AB" to differentiate with previous revision. SST will select the revision to be shipped to customers based on inventory availability.

Despite the product consistency, some customers may choose to specifically qualify the enhanced latency performance SST36VF160XE. SST will support sample requests of this product as needed. Furthermore, if any customer has restrictions on accepting this product, please inform your SST sales representative so SST can make special arrangements.

If you have any questions, please feel free to contact your local SST representative.

Sincerely,

Steve Chen
