Re: SanDisk Lead Free Program Update

Beginning in years 2005 and 2006, the requirement for lead-free product will take effect within the European Community. SanDisk has a program to meet the requirements of the European Community and its customers.

Card products will transition to lead-free in FY 2004 based upon the following schedule:

- Mini SD is lead free
- MMC and RSMMC SIP based designs are lead free
- TransFlash is lead free
- SD SIP based designs are lead free
- SD SMT based products will be available as lead-free versions by the end of Q3
- CF product will be available as lead-free versions by the end of Q3
- 3B product is scheduled for the end of FY04

Concurrently, SanDisk is also driving to attain ISO14001 certification that addresses our Environmental Management System, which includes RoHS and WEEE criteria. This certification audit is scheduled for late Q3 FY2004 time period, with formal certification by year-end 2004.

If you should have any questions relating to the SanDisk lead free program or its implementation please do not hesitate to E-Mail your Customer Quality Advocate at [customer\\_quality@SanDisk.com](mailto:customer_quality@SanDisk.com) for further details.
